VIOLENCE AND SUICIDE PREVENTION

Outreach
TECHNOLOGY & LEARNING SOLUTIONS

Together we can protect our communities

Outreach Technology & Learning Solutions is a technology partner focused on school safety, suicide prevention, and violence prevention. We have over thirty years of experience with schools, communities, and law enforcement. We provide comprehensive SaaS technology and training solutions focused on school safety through suicide and violence prevention.

Our patented software platform, Outreach, connects data across disparate systems (justice, education, social services, mental health, police, community) and levels (local, state, region, national) in a robust and secure digital environment.

Solutions in place are currently insufficient to ensure school safety at schools across the U.S.; Outreach is the platform for the next generation of impact

Problem

Districts face rising self-harm and violence risks, fragmented processes, and inconsistent documentation, making early intervention difficult and leaving leaders without auditable data for reporting and compliance

A U.S. Secret Service study of 41 school attackers found two-thirds had signaled self-harm or suicide risk before the attack

Mechanism

Most states now have a dedicated school-safety entity and require written safety plans, creating standard operating procedures, consistent planning, and centralized data reporting across districts

At least 32 states have an established school-safety entity and 44 states plus D.C. require school-safety plans

Outreach

Outreach is the platform connecting stakeholders to finally address this national crisis

Outreach is the one platform that brings together schools, communities, and the organizations responsible for both threat assessments and suicide assessments to intervene: supporting mental health and preventing violence

FEATURES INCLUDE

- Threat Assessment
- Suicide Assessment
- Client Portal
- Web Application
- Response Coordination
- Secure Messaging
- Mobile App
- Learning Portal

"Outreach has turned threat assessment from a stressful checklist into a collaborative safety practice. Risk is no longer something we address in silos: it is proactive decision-making through shared insight"
Todd C., Coordinator for School Counseling & ISD Processes

VIOLENCE AND SUICIDE PREVENTION

Outreach
TECHNOLOGY & LEARNING SOLUTIONS

Most solutions improve reaction time, but they do not fix the underlying breakdowns that allow risk to build unnoticed

Incident Detection & Monitoring
Tools focused on seeing problems in real time, such as cameras, access control, alarms, and panic notifications

Standalone Software Tools
Point solutions for reporting or threat assessment that live outside day-to-day school workflows and rarely connect to other systems

Reactive Response & Notification
Emergency messaging and response coordination designed to speed reaction time after a situation has already escalated

OUTREACH ADDRESSES ROOT CAUSES DRIVING SCHOOL SAFETY INCIDENTS

Fragmented Tools & Siloed Data
Risk signals are scattered across departments and tools, so no one has a complete view of what's happening with a student or situation

Limited Early Intervention
Without a unified record and analytics, districts struggle to spot patterns early and intervene consistently before issues escalate

Inconsistent Documentation
Key notes, assessments, and plans live in emails, PDFs, and spreadsheets, making it hard to standardize actions or prove follow-through

Broken Cross Agency Hand-Offs
Information and responsibilities do not flow cleanly between schools, districts, and external partners, creating gaps during handoffs and follow-up

OUTREACH WORKS ACROSS ENTITIES

NGO & Community Organizations
Integrates frontline partners into cases to improve the data quality and outcomes for students

K-12 Schools
Used by frontline staff to manage complex cases and intervene early to prevent self-harm or violence for students

Public Health & Mental Health
Provides HIPAA-compliant connections for trauma-informed intervention and case management

District Administrators
Aggregates FERPA-protected systemwide data with SOC 2-audited security controls to ensure compliance, flag hotspots, and preserve institutional knowledge

Law Enforcement & Public Safety
Creates secure channel with law enforcement buy-in for sharing off-campus information and threats across partners

State Government & Public Agencies
Integrates cross-sector systems and rolls up data to inform strategies and policies for school safety and violence prevention
